

## APOLLO – The new SKAKO counter-current mixer

# Quicker Cleaner Safer

### 1. Quicker:

Unique shovel and discharge gate design increases mixing action and dramatically decreases discharge time.

### 2. Cleaner:

The automatic self-cleaning unit blasts 20 GPM of water at 2,700 PSI to remove concrete build-up.

### 3. Safer:

Two sets of double-doors, placed in opposite walls of the mixer, allow replacement of wear parts without entering the confined space of a mixer pan.

The new APOLLO mixer features SKAKO's front runner technology, so that productivity increases, just like safety, to give you peace of mind.

For increased concrete production:

- New shovel design accelerates mixing of high quality, homogeneous concrete.
- The design and placement of hydraulic discharge gate means 23% faster discharging.

For faster, more thorough cleaning and longer mixer life:

- Automatic self-cleaning cuts cleaning time by 50%.
- The rounded, smooth interior surface, counter sunk bolts and differential speed mixer stars eliminate dead zones and reduce build-up of concrete.

For a high level of safety:

- All wear part replacements are performed from outside the mixer-- not in the mixer pan.
- Safety interlocks for all mixer pan access doors and discharge gate covers.
